

**...challenging an  
unknown person  
in your area!**

## **YOU'VE BEEN CAUGHT...**

**TAKING ACTION.** In the animal kingdom, awareness — being alert to danger signals and responding quickly — can be the difference between surviving and not. Technology alone cannot protect our systems, confidential data or our personal safety. Personnel like yourself who have developed an awareness of danger signals can function as one of our organization's sensitive detection instruments. Recognition of events or situations as a security incident (or that could lead to a security incident) should be a reflex — but awareness without action is worse than ignorance. You have shown yourself as a vital member of our security awareness take-action team.

**THANK YOU and KEEP AWARE!**

...logging off your  
workstation before  
leaving!
